Unmasking the Intricacies: A Pyogenic Abscess Case Report

Dr. Shailendra Singh, MD (Hom) – Maa Gayatri Homeopathic Clinic, Vandematram Chouraha, Bittan market, Bhopal (M.P). 9826071550.

A patient 26-year-old, Mr. MRS, residing in Bhopal, sought medical assistance for his complaint of pyogenic abscess, which is the most common type of abscess often resulting from cellulitis or acute lymphadenitis. Initially, the affected area was characterized by redness, heat, and tenderness. As the abscess progressed, the pain became throbbing in nature. Upon evaluation of the patient's condition (as depicted in Figure 1 and 2), a referral to a surgeon was recommended. However, due to the patient's father's previous successful experience with homeopathic treatment, he opted for homeopathy. The prescribed course of treatment included the following medications: Belladonna 1000 CH, Hepar Sulphuricum 1000 CH, Calcarea Sulphuricum 1000 CH, and Silicea 1000 CH, each to be taken as 6 pills at a time, three times a day. All the medicines to be taken in a 5-minute interval. The duration of the treatment was set for one month.

Lichen Simplex: A Singular Case Study*

A 14-year-old girl, Ms. PM, residing in Satna (M.P), sought medical assistance for the problem of lichen simplex chronicus. This condition is characterized by localized and severely itchy skin, which appears thickened and exhibits increased skin markings. The affected area can be found on various parts of the body, with the back of the neck, legs, feet, or ankles being the most common locations. The patient's condition is depicted in Figure 1. The treatment was initiated on 20/09/2019 to address the symptoms and provide relief to the patient. Medicines prescribed were Belladonna 200 CH, Hepar sulphuricum 200 CH, Graphites 200 CH, and Biocombination no. 20. After 6 months of treatment with the above medicines, she was completely cured.
